The following problems were identified by walking through the screens using Stacey's task and the four Cognitive Walkthrough questions.

Screen	Question	Description of Problem
3	Q3	The form has separate Address and Popular Locations tabs for both the starting point and destination. A first-time user may not know whether to enter "Keller Hall" and "Great Harvest Bakery" as addresses or look for them under Popular Locations.
4	Q1	The Fewer Transfers preference does not fully match Stacey's needs. She prefers a direct trip but is willing to transfer if it gets her there significantly sooner. Selecting this option may lead her to prioritize fewer transfers without making the time trade-off clear.
5a	Q2	The results page has several links related to route details and maps. A first-time user may not immediately notice which link will help them understand the walking part of the trip or locate a transfer stop.
5b	Q3	When an itinerary includes more than one bus route, users need to understand where to get off the first bus and continue on the second. If the transfer details are not easy to distinguish from the other route information, a first-time user may have trouble identifying the correct transfer steps.
6	Q4	The two maps show the locations of the transfer stops separately, but they do not show a walking route connecting them. Stacey specifically wants to know exactly where to walk when transferring, so these maps may not provide enough feedback to help her follow the transfer.
