Application / Website / Technology Name: Spotify Desktop (free)

Application / Website / Technology Description: Spotify is a desktop music-streaming application that allows users to search, discover, organise and listen to music.

Heuristic: Flexibility and efficiency of use

Screenshot:

Explanation of solution:
Spotify gives you a few different ways to keep your music organized. When you right-click on a song, you can instantly add it to your Liked Songs, throw it in your queue, or pick a playlist you've already created. If you want to start fresh, you can create a new playlist right from that same menu. Plus, the built-in playlist search makes finding a specific list super quick without having to scroll through everything manually. All of this makes managing your music feel effortless and saves a ton of time.

Explanation of solution:
Spotify features a dedicated queue screen where you can check out what's currently playing alongside upcoming tracks. You can easily remove any song from the queue if you're not in the mood for it, giving you total freedom over your immediate listening session without needing to tweak or rebuild your main playlist. Plus, the Recently Played tab makes it a breeze to jump back to tracks you were listening to earlier.
